

Sustainability training

We help organisations and individuals strengthen their competence in different aspects of sustainability management, through our engaging, technically robust and practical courses. These are delivered as public courses, in-house or tailored to specific organisations. Our courses include:

- Sustainability Management Leadership
- Sustainability Risk and Opportunity
- Successful Sustainability Management
- Supply Chain Sustainability Management
- Product Sustainability Management
- Business Ethics and Anti-corruption
- Stakeholder Engagement
- Sustainability Reporting and Communications
- Carbon Footprint & Management
- Energy Management

Stakeholder Engagement

Stakeholder engagement

Engaging stakeholders is an important aspect of risk management. It is also a way of ensuring that the organisation continuously understands and responds to the expectations of stakeholders. Through our stakeholder engagement services we add credibility to an organisation's stakeholder engagement efforts. Our services include:

- Assessment of stakeholder engagement strategies and programmes
- Assurance of stakeholder engagement initiatives

About DNV

DNV Business Assurance

DNV is a global foundation created in 1864 with the purpose of safeguarding life, property and the environment. Sustainability is our core business and we are committed to helping our customers achieve commercial success through the adoption of responsible business practices. We operate from 300 offices in over 100 countries. Our approach is practical, grounded in high ethical standards, deep technical competence and knowledge of the commercial and socio-economic reality in which our customers operate. Business Assurance is a part of DNV responsible for the provision of certification and other assurance services worldwide. We are a different assurance and certification body. Our solutions are tailored to the specific needs of our customers and aim to deliver tangible improvements in their business practices.

Why DNV

DNV recognised as a global leader in Sustainability Assurance

DNV's sustainability assurance services managed by DNV Business Assurance were put to the test in a global survey carried out by Verdantix.

DNV was considered to be a global leader in sustainability assurance. The overall breadth and depth of DNV's assurance services and proven expertise were considered to be the highest in the sustainability assurance market.

Sustainability is a key business issue which presents important risks and opportunities for organisations.

Robust sustainability performance and responsible business practices are essential to the long-term success of organisations, their products and services.

Product Sustainability

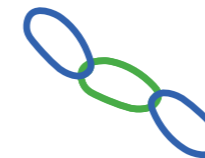

How can you measure and demonstrate the Sustainability of your products?

There is a growing interest in the sustainability performance of products. To this end, organisations need to understand the sustainability risks and opportunities associated with their products, measure their sustainability performance, and make credible claims about their products. Our services help organisations build trust in their products and include:

- ProSustain™ certification (DNV's Product Sustainability Certification scheme)
- Product Carbon Footprint
- Product Water Footprint
- Traceability Assurance

Supply Chains

How can you build trust and visibility in your Supply Chain?

An organisation's social responsibility goes beyond its own activities and the boundaries of its facilities. Increasingly organisations are expected to adopt and demonstrate responsible supply chain practices. Our services help organisations increase trust and visibility of their supply chain through:

- Supplier audits and assessments
- Social accountability certification (SA 8000)
- Sustainable supply chain management process certification
- Assessment of procurement and supply chain management processes
- Supplier assessment, training and engagement

Integrity & Business Ethics

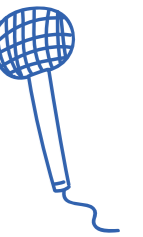

Manage Corruption Risk and demonstrate Integrity

Corporate Integrity and business ethics are essential to an organisation's future. Incidents can severely affect brand value, and customer and employee loyalty. We help organisations understand their risk profile, adopt measures to prevent, detect and respond to such risks. Our services include:

- Corporate integrity profile assessments
- Corruption risk management assessment
- Corruption risk management training
- Assurance of corruption risk management processes

Reporting & Communications

Report and communicate credibly

Reporting and communicating on sustainability challenges, opportunities and performance is essential for an organisation to demonstrate transparency and build trust. Through our assurance services, we help organisations ensure the quality and credibility of their sustainability reports and communications. Our services include:

- Sustainability Report Assurance
- Assessment of Sustainability Data Management Systems
- Verification of selected data/information
- Assurance of specific sustainability claims on organisations or products

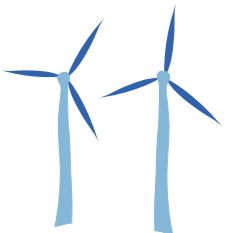

Climate Change & Energy

Manage Carbon and improve Energy Efficiency

Climate change is a key sustainability issue. International carbon schemes regulate and set requirements that affect industries worldwide. How prepared are you for new national and international regulations, changes in the market and in physical conditions due to climate change? What is the impact of your organisation and products? How can you demonstrate your commitment to reducing your contribution to climate change? Our services include:

- Organisational carbon footprint assurance
- Product carbon footprint assurance
- Supply chain carbon footprint assurance
- Carbon reporting assurance
- Energy efficiency assessment and certification

Focus and Direction

What does Sustainability mean to your organisation?

Sustainability covers a wide range of issues, from climate change, biodiversity, business ethics, human rights, to health and safety. Through our sustainability risk and opportunity assessment services, we help organisations:

- Identify, understand and prioritise sustainability risks and opportunities
- Understand what stakeholders expect from their performance
- Focus on the issues that are most significant to their business and stakeholders
- Set meaningful goals and improvement programmes

Management Systems

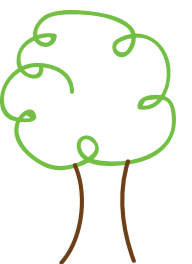

How can you integrate Sustainability into your management systems?

Management systems enable organisations to manage different aspects of sustainability in a structured and focused manner. Through our assessment and certification services, we help organisations integrate sustainability into their management processes and practices. Our services include:

- Assessment and training on ISO 26000
- Certification against the CSR Performance Ladder
- isrs™ assessments (a DNV management system assessment framework integrating quality, environment, health and safety, and sustainability)
- Benchmarking of sustainability management practices

Natural Resource Management

How can you demonstrate responsible management of Natural Resources?

The use of natural resources presents a range of risks and opportunities. Our assurance services help organisations demonstrate the adoption of responsible natural resource use practices and include:

- Marine Stewardship Council (MSC) certification
- Forest Stewardship Council (FSC) certification
- Biomass certification
